PROJECTS:

Movies Realm – A Movies Website

- Movies Realm is a dynamic and user-friendly website designed to provide a seamless movie browsing experience. I've created a platform where users can explore a vast collection of movies
- Frontend development using HTML, CSS, and JavaScript to create visually appealing web pages.
- Backend implementation using PHP to manage database operations and user authentication.

Portfolio – Fronted Development

- Developed a personalized portfolio website to showcase professional skills, projects, and achievements.
- Utilized HTML, CSS, and JavaScript to create a visually appealing and interactive platform for self-presentation and project display.

Employee management system using C++ -

- The Employee Management System is a C++ program designed to efficiently manage and maintain employee records within an organization. This system offers functionality to add, list, modify, and delete employee details, providing a comprehensive tool for human resources management
